## Product description

### NFC product

The black NFC tag is made of PPS and is therefore robust and waterproof. The tag can be washed without any problems as it can withstand extreme temperatures (-20 °C to 180 °C), pressure and even chemicals. This article has a diameter of 30 mm and a material thickness of 3.20 mm. In the middle there is a hole with a diameter of 5 mm. With the help of the hole, the PPS Tag can be easily sewn to garments. It can also be attached to objects with a nail. This product is compatible with all NFC-enabled smartphones.

### NFC chip

The PPS coin is equipped with the original NXP NTAG213 and offers a cost-effective entry into the NTAG21x series. The NXP NTAG21x series impresses with the greatest possible compatibility, good performance and intelligent additional functions. The NTAG213 has a total capacity of 180 bytes (free memory 144 bytes), thereof usable memory in the NDEF 137 bytes. Each individual chip has a unique serial number (UID) consisting of 7 bytes (alphanumeric, 14 characters). The NFC chip can be written up to 100,000 times and has a data retention of 10 years. The NTAG213 has the UID ASCII Mirror feature, which allows the tag's UID to be appended to the NDEF message, as well as an integrated NFC counter that automatically increments during readout. Both features are not enabled by default. The NTAG213 is compatible with all NFC-enabled smartphones, the NFC21 tools and all ISO14443 terminals.
