Product number: 69039

NFC e-Paper Display ABS - 4.2 inch - 105 x 94 x 9.90 mm - white

Product information

The NFC display combines an e-ink display with an NFC interface, which can be used to update content via smartphone. The display has a diagonal of 4.2 inches (10.6cm) and displays black and white content permanently and without power supply. The E-Ink technology makes it easy to read even in bright environments and sunlight. The display is enclosed in a robust ABS housing and can be easily attached to flat surfaces using the enclosed 3M adhesive pad.

The necessary energy as well as the data to be displayed is provided via NFC. The display can be programmed with new content via Android or iPhone app. In our How2s programming NFC display with Android and programming NFC display with iOS we show the process step by step. Due to the permanent display of the content, which can be changed at any time, the display is suitable, for example, for displaying prices, as a dynamic door sign or for storing notes.

Functions

- Powerless display of content
- Display of black and white
- Updating via NFC smartphone (Android and iOS)
- Update time approx. 4S
- 400x300 pixel resolution (120 DPI)
- Viewing angle > 170°
