Product number: 68251

NFC & RFID card protective sleeve ? 90 x 60 mm ? black | black

Product information

With our NFC & RFID protective sleeves, you are on the safe side: easily protect your cards from unauthorized data reading. An integrated aluminum layer in the protective sleeve ensures that readers cannot scan and retrieve the data contained on a card.

The NFC & RFID protective sleeve fits all cards that have a typical credit card format, and thanks to its thin material, it is pleasantly light and space-saving to carry in your wallet.

Short description

- Material: 182GSM aluminum paper
- Format: 90 x 60 mm
- NFC and RFID signal blocking
- Shielding of the commercially used frequency 13.56 MHz

Product description

Protective Sleeve

The NFC & RFID protective sleeves are made of coated cardboard on the outside, which not only protects the card from external influences, but also impresses with its slim fit and glossy design. The paper core contains a thin layer of aluminum. The horizontal opening on the short side allows you to easily store your card inside. With a format of 90 x 60 mm, the protective sleeve is slightly larger than a typical credit card, which means that any standard card will fit inside.

NFC & RFID protection

NFC (Near Field Communication) and RFID (Radio Frequency Identification) technologies are contactless communication methods that allow the necessary data to be transmitted completely contactlessly and wirelessly over a certain distance. Nowadays, they are found in all debit and credit cards, chip cards, and ID cards. To protect these cards from unauthorized access or data theft, our protective sleeves have a simple but very effective function: a thin layer of aluminum in the paper of the protective sleeve ensures that readers cannot access the card's data, as it is shielded. This means that the 13.56 MHz frequency used by readers to read the data is not actively blocked, but purely physically.

Product properties

Product number	68251
Available colours	grey , black
Material	GSM cardboard / aluminium
Detail colour	black
Colour category	black
Type	NFC Blocker
Dimensions	90 x 60 mm (W x H)
